1. The following is an examiner's statement of reasons for allowance: see Board decision.

Up date of prior art & review of references from other subclasses directed towards irradiation + deposition, not necessarily from vapor, found no more relevant prior art. The reference to Hacker et al. (4,948,629) is cited as of interest as it employs a pulsed excimer laser to deposit diamond from vaporized organic compounds in a carrier gas via a technique where deposition occurs in locations where the laser strikes substrate & the deposition is initiated by photo dissociation via the excimer laser (col. 1, lines 31-col. 2, line 5 & example 2; especially noting col. 1, lines 65-68 & col. 2, lines 34-36), however the disclosure of this patent provides insufficient information to determine the precise mechanism, i.e. whether the photo dissociation is occurring in the gas above the deposition site, or on the substrate after condensation of the organic compound, hence whether or not it reads on the claimed invention. It is noted that discussion in Ziv et al. (5,060,595, previously cited in IDS; col. 5, lines 8-27, especially 16-18) suggests that photolytic mechanisms are generally in the gas phase, while laser reactions induced by surface effects are generally pyrolytic mechanisms, but these conclusions cannot be necessarily applied to nor excluded from the Hacker et al. teachings, hence Hacker et al. can only said to be of interest.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
